I do have a Clegg 99'er in the project queue. It looks like it was
stored in a coal mine; it's really dirty. I may just look for a better one.
I have seen a couple show up at hamfests (should've bought the clean
one for \$35 I saw a year ago.) Don't know when I'll get to it though.

Subject: 1115 volts on a 6146 ?!?!?!?
Message-ID: <819761925.3337560@AppleLink.Apple.COM>

Well, the glowing HT-32A finals mystery has just gotten clearer. While
(carefully) measuring the voltages I discovered 1115 volts on the plates.
Yes, that's no slipping digit. Eleven Hundred and fifteen volts. With
max plate rating of the 6146 at about 600 for ICAS operation I can see
why these boys are a bit over heated with just -50 volts of bias.

Now the \$64k question; How come the plate is at 1 kV+, and what should it
really be? I can see that the previous owner replaced the power transformer,
so there's a chance he goofed when hooking the B+ up, or maybe he got a higher
output transformer deliberately and was trying to make a Halli-kilowatt out of
this beast.

In any case, I'd appreciate any intel on this situation and possible
suggestions on how the HV coils on the transformer might have been hooked up to
produce twice the voltage I suspect they should be. Don't you ground the

center tap and run the HV legs to the plates of the 5R4 to get full wave DC at half the output winding voltage rating? (Eg 1 kV output, w/grounded center tap = 2 500 volt taps 180 deg out of phase?)

Of course if anyone can enlighten me as to the appropriate plate voltage for the 6146 finals on a Halli HT-32A, I'd appreciate it.

Subject: Align R390A
Message-ID: <30DB498D@smtp.stp.tec.mn.us>

In the past ,I have seen alignment instructions printed for the R390A that were a little more straight forward than the ones in the R390 manual. I am concerned about going through the job with the stock alignment particularly with stagger tuning.

Does anyone have, or know where I can get, a really good set of alignment instructions?

Subject: Any Heath HA-14 users out there?
Message-ID: <199512230340.TAA00337@ix9.ix.netcom.com>

One of my favorite pieces of equipment is a Heath HA-14 linear amplifier. It was actually sold as a mobile amplifier but there was an AC power supply available too. The circuit is very similar to the SB-200 and the amp itself is about the size of a large book. Real cute! I am still using mine--wouldn't give it up for anything.

Is anyone else using one, or do you have some stories to share about the HA-14?

Subject: Hallicrafter's Christmas Message
Message-ID: <199512231343.HAA17841@dlep1.itg.ti.com>

Here is Hallicrafter's two page Christmas ad from January 1940 QST:

"Just five years ago this month, the first Hallicrafters advertisement
appeared in QST. With the production of that original S-1 model, we joined
an august company of builders of communications equipment. They have been
fine, clean competitors with a standard of ethics commensurate with the
dignity of the amateur fraternity.

Al Ready, owner of the National Company, we have known for years. Lloyd
Hammarlund is still one of our best friends. And it has been good to see
Jim Millen start out on his own. No one wishes him more good sailing than
we do.

E.G. Shalkhauser and Russell Planck launched RME shortly before we entered
the field. They have been a real success, and we are happy to see it. To
the others, too, who have endeavored successfully to build equipment to your
precise requirements, we hope they have found a favorable (unreadable).

All together, we have constantly endeavored to increase the efficiency of
amateur apparatus and to improve electrical and mechanical tolerances.

The progress in these last five years has been phenomenal. The art of communications has been constantly simplified by such improvements as band-switching in both receivers and transmitters; the inclusion of power supplies in receivers; and stricter adherence to functional design. The newer tubes have made remarkable things possible -- receivers are more efficient and more compact -- the size of a transmitter has been cut almost in half!

A whole station now sits on a single desk -- and blasts its way around the world. And always the costs have been lower and lower.

No one knows what the next five years will bring in technical developments. Some of us have visions, and the finest engineers in the world are burning the laboratory lights far into the night to make those dreams practical.

You have been mighty nice to us these past five years and we hope to pay you back with better and better equipment. In the mean time, a Merry Christmas.

Don't know about the "lunchbox" but back in the '50's our club (Fox River Radio League) in Aurora, IL. made a bunch of "Club Savers" which were along the same line. A friend of mine did convert one to either 10 or 15 meters and had a ball with it.

Subject: Help identify battery
Message-ID: <199512230220.UAA15264@uro.theporch.com>

Hello to all,
I have a battery that I would like to know the origin and what it may have been used for.

The description is:

Clear glass jar about 1 gallon in size 7" dia. and 10" tall. There is only a small marking on the jar that looks like a sideways wishbone shape, no other markings.

Ceramic top that sits on the top of the glass jar, top has the name "EDISON" and "MADE IN USA" in raised letters.

Suspended from the top are 5 zinc plates with 4 carbon plates between them that have ceramic insulators to separate the plates. Plates are 4.5" wide and 5" tall.

In the center of the top is a brass stud with a brass wing nut for connection of the plus side of the battery. There is a small hole on one edge of the top for a wire that leads into the jar that connects to the zinc plates for the negative side.

Thanks, Jake KK5HY

Subject: Re: Mu-metal follow up
Message-ID: <199512222025.0AA15895@uro.theporch.com>

More discussion on Mu-metal:

Mu-Metal is all but dead for special applications

PERMALLOY 80 is now used and ADVANCE MAGNETICS is the leader in North America for shielding applications.

These are both soft magnetic alloys and have nothing to do whatsoever with the above stated permanent magnetic materials.

Mu-Metal and permalloy are Nickel/Iron alloys carefully made to exact ratio and avoiding impurities which inhibit them from obtaining high-u. Mu-Metal is more sensitive to mechanical abuse than PERMALLOYS and has been dropped for use as sheilding for quite some time. Mu-Metal still has some special applications where the very lowest saturation gauss is required. Min. coercivity is about the same for the two as is max. permeability, however in practice the PERMALLOYS are much easier to manufacture in bulk with consistent outcome.

Mu-Metal varies from batch to batch and a simple bend of the material greatly reduces permeability, where the PERMALLOYS can be bent and formed

without losing shield properties to
badly. Nothing better than Permalloy 80 has been discovered for
shielding...yet!

Subject: My wish for the New Year...
Message-ID: <9512222247.aa09256@jackatak.theporch.com>

is that everyone show more consideration for everyone on the list...

This has been a wonderful experience, and this list is a marvelous
place for me to hang out and enjoy the company of folks who enjoy the
same things.

Let us take the time to edit down the text we include. For the moment,
I'd like to overlook the obvious bandwidth logic for this, and point
out the "intellectual" investment we all should make: if you can't be
bothered to edit the submission, and remove the text that isn't
related to what you are posting (WORST POSSIBLE: Why include the
headers from another post? Or, the .sig block at the end) so what we
have represents a Net Addition to the list...

Let's all try to treat each other with respect and dignity, and not
point fingers, call each other names, or display our fanatical
parochialism, not matter how well-placed it might be... ;^)

Let's make our submissions to the list worth reading, edit for
clarity, and include only the text from a previous post that is
REQUIRED to make your point... there is no *good* excuse, save
laziness or lack of consideration of the rest of the list, for
including all of a previous post with a "Me, too!" comment... make

that one to your monitor and save the list from such banal remarks...

So, I'm not real greedy, and I don't expect all these things, so, I'll settle for two outta three! ;^)

Happy Holidays, ya'll and a very Happy and Prosperous New Year to All!

--

From: Bill Sorsby <bill.sorsby@dlep1.itg.ti.com>

Subject: National Company Transmitter

Message-ID: <199512231004.EAA14738@dlep1.itg.ti.com>

Greetings BoatAnchorites;

A number of times on the list I've seen reference to the fact that National did not make transmitters. December 1938 QST, however, carries a full page ad for a "600 watt" National Company transmitter. This transmitter consists of 5 rack mount assemblies which are shown in a rack standing about 6 feet high. Text of the ad is as follows:

"The National 600-watt Transmitter is so thoroughly engineered that the newcomer can proceed with confidence, yet the units are so flexible that they allow the constructor almost complete freedom in building to suit his own particular requirements. The basis of the 600-watt Transmitter is the set of Foundation Units, panels and chassis completely finished and ready for assembly, supplied with the necessary special parts and hardware. The power supply and modulator chassis are punched to receive standard Thordarson CHT units, combining convenience and reliability at low cost. More complete information on this efficient and economical transmitter will be found in the National "600-watt Transmitter" Booklet, newly revised, and in the National Catalogue, both available from your dealer."

Obviously, this item would be a must-have for any serious National collector! Hmmm..., wonder how many were made.

Anybody ever run across a Johnson receiver?

Regards,

Bill Sorsby, N5BU

bill.sorsby@dlep1.itg.ti.com

Message-ID: <199512231431.0AA23325@csranet.com>

I have one of the National Company NTE exciters made in 1939. It is push button bandswitched and covers 5, 10, 20, and 80 meters. It produces, I believe, about 15 watts of RF and includes a speech amp. About the size of an NC-100 receiver.

Speaking of "rare" transmitters, does anyone remember the Hammarlund 420? I don't remember the tube line-up but it seems to me that it used the plug-in JEL coils for the output tank (probably an 807). It had a matching modulator, the 410. There was no VFO in the rig. Wish I still had those units - be great to drive my desk KW.

I appreciate input from the people here.
It takes work and teaches me something.
However, posting anything that must be decoded is the quickest way I know to be ignored. If it's that long, send it as a file to the archives.
I don't mean to be harsh or flaming,
I just don't want to see anyone go to all that work trying to contribute just to be ignored.

Hi!

An interesting story to share, but there's a catch: it **must* *not** go any farther than the BA-list.

I mean it--PLEASE don't anybody post it to a Usenet Newsgroup, another mailing list, or talk about it on the air. (Jeff H., I know this great rec.radio.broadcast fodder, but not right now, please!)

Remember the transmitter fire we had at work, and the week of serious fixing that followed? Along about the first week of December, it got another chapter: the capacitors that burned up turned out to in fact be PCB types.

They were very small, and only six of 'em actually opened up and boiled dry, only one of them all the way. But nevertheless, initial tests showed some very nasty "hot spots" with high concentrations of PCBs in soot, so our consultants (brought in as soon as we found out!) set down very strict guidelines pending further testing: full level C hazmat garb (a sort of a gas mask, hooded coveralls, booties and gloves--heavy plastic over latex) 'til further tests were conducted.

Results of the "further tests" came in yesterday, and most of the building's not bad; we still must wear booties and latex gloves (coveralls optional), but the air-purifying respirators are only needed for work in the air system, inside the transmitter, and in the garage where the sooty remains of the old power supply is stored.

All of us who worked on the gear in post-fire fix-up have had blood tests and our PCB levels are very low, at or below population norms. PCDD and PCDF levels in the building are also quite low--I haven't yet seen the dope on the soot in the burned equipment, but I 'spect **it** is fairly bad. We were lucky--most of us wore latex gloves and kept our hands washed, while much of the first-stage cleaning was done with household ammonia rather than alcohol; the ammonia's not as likely to carry nasties through the skin and it encourages not inhaling right over the surface being cleaned. (Thanks, Hank van C--it was you who first put me on to the stuff!)

But now you know why I have been so scarce. All of my work at the transmitter has been in what amounts to a cheap space suit; it is very tiring and frustrating. Worse yet, with the new transmitter slated to be shoved off the truck early in February, there's a lot of work to be done to the building...none of which can begin until we have the site scrubbed down to EPA standards! Worry has been eating me alive, and the overtime is pretty preposterous; we have to get in the building when we can and

accommodate the needs of the hazmat consultants plus various clean-up and disposal subcontractors.

It's no fun. My advice is to avoid old oil-filled condensers; this clean-up is barely started and the bill is already more than I make in a year! If you've got to have a Sola, check the condensers; if they're PCB types, replace them! No matter what it costs, it's cheap. (Hint: silver or grey Solas almost certainly have PCB caps, tan or brown ones are likely to be okay...but check anyway. Sola used Aerovox oil caps mostly, with about 65% PCB content in the oil).

So now you know. As I requested above, this information is *just* for the BA-list "family," and I would very much appreciate folks *not* cross-posting it or discussing it on the air.

I'm probably going to continue to be scarce right up through the end of February. There's a lot to be done, and it's all got to happen by the book and on the bounce: we can't afford to waste any time and we sure can't cut any corners! (And that's not just per EPA regs--extensive building modifications are needed, meaning a lot of various consultants, contractors, architects and workmen, and we are *not* going to expose them to any risks!)

Alas, one of the things that went by the wayside was any attempt at Christmas celebrations at our house. So if I don't seem to have much holiday spirit, that's why. Dean and I might try to do a little in the week between the 25th and New Years--at least with the worst of the hazmat restrictions lifted, some of the pressure is off! (Dean's had to put in a lot of OT, too--the holidays are awfully busy where he works!)

I also need the original knob for my R390A if anyone has another spare.

I have just resurected a R392..
It works very well, but I still like my SP-600 more :0)

My question is what is the audio output impedance at the power/audio socket? Is it 600 or 250 ohms? There is what looks like a transformer behind this socket..Is it an output transformer or do I need an external one?

If I need an external I have some 70.7 v transformers I can V^2 / p with..

Hello Tom.

In your BA spotting in the movie, you missed the BC-306 antenna loading coil bolted to the starboard side of the bulkhead between the radio room and cockpit and a shot or two of stored BC-375 plug-in tuning units on the starboard side of the radio compartment rear bulkhead (it pays dividends in detail resolution to use the baseband video input on your TV set rather than the RF modulator!).

The critics panned "Memphis Belle", but what the hell do THOSE Bozos know? These days, if it ain't got Stallone or Schwarzeneger in it, applying an Uzi to everyone in sight, it's not worth their notice.

Re. the FAX with the MCW keyed over it: that was a director's idea of what German noise jamming sounded like, I suppose.

I found that aspect kinda interesting, because I've been fascinated by the whole subject of jamming for some time.

The MCW in the film was similar to the system the Soviets used on Radio Free Europe and VOA. The Soviets used at least two seperate jamming networks, a skywave (for killing reception half a continent away), and a groundwave (for wiping out reception in large metropolitan areas or on a regional basis), all controlled from some central point. A monitoring network allowed them to check on the effectiveness of jamming in a given area, and the control point could pile MORE jamming transmitters on a given frequency and area if necessary.

For this system to work, you have to be able to identify the jammers already in use; thus, each jammer in the network identified itself periodically in MCW (maybe once every 2 or 3 minutes), in a manner similar to that heard in Memphis Belle. It's long been rumored that jammers inside of the USSR IDed with two letters, and jammers in the satelllite countries IDed with a letter and one digit.

It used to be really interesting to watch these nightly battles as they got started. A Radio Free Europe transmitter would come up with dead carrier, just getting tuned up for the broadcast. Before the interval signal could begin, the whoosh of a VFO would be heard, zero beating. Once the interval signal began and positivly IDed the victim, the noise modulation (usually AM in form) began, and OTHER carriers could be heard whooshing in like sharks. One by one they too would start up with thier racket, an occasional MCW ID from each rig popping out of the mess. Around 0000 or 0100 UTC, the 25 metre band was pock-marked with inaudible RFE outlets, each buried under 5 or 6 noise jammers.

To give you an idea just how effective the effort was: for years, I questioned if RFE actually existed at all! In years of SWLing, I'd never really heard an RFE signal on this side of the Atlantic. I couldn't find RFE outlets until I identified the jammers as what they were, THEN the RFE outlets became apparent.

That was a bit off the BA thread; I hope the Subject Police don't jump on me for it! :-)

73's,

Tom, K9TA

Straight Key Night is EXTREMELY unlikely for me, but if I can by some miracle make it, the TX will be Gallopin' Gertie (the UX-210 Hartley oscillator); if conditions are bad enough to require QRO, the Globe King 500A will be warmed up and waiting, as usual; that 4-250 is a MAJOR source of shack warmth! :-)

Antenna is the 160 Windom.

RX is tentatively an HRO-50 (Bobbi, thank Tori again for me), RAS-5, or BC-348R.

Keys will be

1926 Vibroplex "Original"
1938 MacElroy "Mac-Key"

and if QRS is called for

1905 (???) Electric Specialties hand key
1946 (???) MacElroy "Teardrop" hand key

Just keep an ear open for the extremely wobbly signal calling at about 25 WPM, trying to send fast enough to avoid the worst of the "yoops".

73's,

Tom, K9TA

>One place where international usage is NOT metric is in aviation.

The other example of this is in medicine. We measure blood pressure in millimetres of mercury (referring to the BA of blood pressure machines that use mercury column manometers). There was an attempt a few years ago to refer to BP in kilopascals or some such thing but it died a well deserved premature death.

Jeff - I'm almost embarrassed to say that my SKN rig be my regular rig! Drake 2-B, HT-37 and the ordinary straight key that I normally use! Last year I made one contact with an HW-8 and a dipole from frigid NY state.

This year I'll be in front of boatanchors, but in Santo Domingo I have no need for BA shack heating! Hope to work you on SKN.

Hi!

H'mmm...*if* I can somehow steal time to get on the air (unlikely), it'll be either the HRO-5 and plug-in-coil 'Shifter on 40 or 80, or I shall take the HW-9 out of mothballs and see if it does anything.

The key? Oh, dear! Either the homebrew hollow brass special (which I am owing Boatanchor Bob the drawings & pix of), the recently cleaned-up J-38, or the enclosed WW II airplane or sub key. Maybe all three!

greetings;

after several bites, its still available. this is one of less than 50 units done this way by Hammarlund, for big wigs, embassys, and ambassitors, in the government.

the ONLY reason it is for sale, is because my wifes best friend and her 3 young kids,(4 yrs, 3yrs, & 4 months) are stranded in Georgia, after going there for the holidays, and having her car break down beyond repair. (i know, nice guy) well, she has no family to help her, so here i am. if your interested, price is \$650 shipped, i'll ship after the 1st.

and at least 2 people here on BA can attest to its condition and looks. Marc Melucas & Chris Galbraith, both have seen and heard this beautiful unit. so, if you can help me help her out, give me a bump.

PS; need to get her back before the 1st of Jan. (she starst collage the 3rd) so i need the cash asap, i'm in mich.

Many thanks,

Robert Fowle

Well, he did as he said in his post - got the Collins station
on the air last night. I heard at least nine other stations work
(or at least call), and got my own Hallicrafters "Twins" - the
HT-44 and SX-117 - up and running and got into the pack too.

Great to hear the number of folks on - did any on the rest of you check the frequency and just listen in? Suggestion was made to consider a BA weekly gathering... any interest?

And for those who particularly enjoyed it, remember that "CX" - Classic Radio Exchange - is only about six weeks away, so get those BA's checked and working!!

Merry Christmas to all....

The SX100 I was to buy turned out to be a HQ100... :-)
It was quite reasonable, but sans s-meter. If anyone has a HQ100-compatible s meter (I believe they were common to quite a few different HQ series radios) and/or schematics for same, I'd appreciate a note.

Hope you all have a great holiday,
/john
